

What is Natural Language Processing (NLP)?

<https://eduassistpro.github.io/>

Assignment Project Exam Help

From Wikipedia: "Natural language processing (NLP) is an interdisciplinary field of linguistics, computer science, information en

artificial intelligence, computers and human interaction, to program computers to process and analyze large amounts of natural language data."

<https://eduassistpro.github.io/>

What is Computational Linguistics (CL)?

<https://eduassistpro.github.io/>

From the ACL website: “Computational linguistics is the scientific study of language from a computational perspective.

Computational linguists are interested in providing models of various kinds of linguistic phenomena. They may be “knowledgeable” (“statistical” or “rule-based”) or “given” (e.g., “lexicalized”).

Computational linguistics is in some cases motivated from a scientific perspective, trying to provide a computational explanation of a linguistic or psycholinguistic phenomenon.

In other cases, the motivation may be more purely technological in that one wants to provide a working component of a speech or natural language system.”

What is the relation between CL and NLP?

<https://eduassistpro.github.io/>

Assignment Project Exam Help

- ▶ Most of the time the two terms are used interchangeably.
- ▶ In practice, some researchers are more interested in computational models as an explanation of phenomena (with a tree? "A working system or an NLP application (a system (MT), a dialogue system, ...)
- ▶ There are more and more of the latter types of applications are put to everyday use. Have you ordered anything with Alexa?

NLP Tasks

<https://eduassistpro.github.io/>

Many of these problems are complex and cannot be solved with a single model. So they are decomposed into smaller, self-contained problems that can be solved individually and then combined into a pipeline system. These problems are called **in NLP convention.**

Take Information

- ▶ Named Entity Recognition
- ▶ Coreference resolution
- ▶ Relation Extraction
- ▶ Knowledge base population

Pipeline systems are susceptible to **error propagation**. Anytime you can combine individual tasks and do **joint inference**, you can usually improve system performance.

NLP Tasks are often influenced by linguistic conceptions

<https://eduassistpro.github.io/>

Assignment Project Exam Help

Linguistic layer	NLP task
Morphology	Word tokenization morphological analysis
Syntax	syntactic parsing
Semantics	Semantic role labeling semantics representation
Discourse	Discourse parsing
Pragmatics	Dialogue act tagging

Formal characterization of NLP tasks

<https://eduassistpro.github.io/>

- ▶ Simple classification problems
 - ▶ Sentiment/opinion/emotion analysis, text classification, word sense disambiguation (WSD), etc...
- ▶ Sequence labeling problems
 - ▶ Tokenization
switching
detection
- ▶ Problems that can be modeled as trees and
 - ▶ Syntactic (dependency and constituent)
representation parsing
- ▶ Sequence-to-sequence problems
 - ▶ Machine Translation, Text Summarization, dialogue systems(?)

Steps in developing an application

<https://eduassistpro.github.io/>

Assignment Project Exam Help

Supposed you are asked (or wanted) to develop an NL
application, you need to think about

- ▶ How do I deco
the current st
- ▶ For each task, what is the most appropriat
method for each of the tasks?
- ▶ What type of training data should I create (purchase, license)?

General formulation of Learning

Many NLP problems can be solved using optimization:

Assignment Project Exam Help

$$\hat{y} = \operatorname{argmax}_{y \in \mathcal{Y}} \Psi(x, \theta)$$

Assignment Help Project Exam Help Add WeChat edu_assist_pro

where,

<https://eduassistpro.github.io/>

- ▶ x is an element of a set \mathcal{X}
- ▶ y is an element of the set $\mathcal{Y}(x)$
- ▶ Ψ is a scoring function or a **model**, which maps from the set $\mathcal{X} \times \mathcal{Y}$ to real numbers
- ▶ θ is a vector of parameters for Ψ
- ▶ \hat{y} is the predicted output, which is chosen to maximize the scoring function

Learning and search

<https://eduassistpro.github.io/>

- ▶ Search is the procedure of finding the output \hat{y} that gets the best score with respect to the input x by computing the argmax of the scoring function Ψ
 - ▶ The search can be simple if it's a matter of finding the label among $\{\hat{y}_1, \hat{y}_2, \dots, \hat{y}_n\}$
 - ▶ Or it needs to find the best part of the function $\Psi(x)$
- ▶ Learning is the process of finding the parameters θ .
 - ▶ This is done by optimizing some function based on labeled data in a training process
 - ▶ The parameters are usually continuous, and learning algorithms generally rely on **numerical optimization** to identify vectors of real-valued numbers

Learning Methods for Simple Classification

<https://eduassistpro.github.io/>

- ▶ Supervised Learning
 - ▶ Generative
 - ▶ Naive Bayes
 - ▶ Discriminative
 - ▶ linear models: Logistic Regression, P_V
 - ▶ N_m
- ▶ Unsupervised Learning
 - ▶ EM-based algorithms (backward side), clustering algorithms (K-means, EM, Hierarchical)
- ▶ Semi-supervised methods
- ▶ Search is usually trivial, and involves finding the label that gets the highest score.

Sequence Labeling methods

<https://eduassistpro.github.io/>

Sequence labeling methods can be viewed as classification combined with a search algorithm

Assignment Project Exam Help

- ▶ Supervised Learning
 - ▶ Generative
▶ Hidden Markov Models (HMM): Naïve Bayes
 - ▶ Discriminative
 - ▶ Logistic Regression combined with the Viterbi Algorithm
 - ▶ Non-linear models: LSTM-CRF, a form of RNN combined with a search algorithm
- ▶ Unsupervised Learning
 - ▶ Backward-forward, a form of EM algorithm for sequences
- ▶ semi-supervised methods

Tree-based learning algorithms

Tree-based methods c
with a search algorithm

Assignment Project Exam Help

► Supervised Learning

► Native Pines grammar with the CKY al
parsing

► Discri

- P
parsing

► Perceptron or logistic regression com
for constituent parsing

► Non-linear models:

- LSTM combined with CKY

► Unsupervised Learning

- Inside-outside, a form of EM algorithm for trees

► semi-supervised methods

Learning and linguistic knowledge

- ▶ The relative importance of linguistic knowledge has been a recurring topic of debate.
 - ▶ “Every time I fire a linguist, the performance of our speech recognition system goes up.”
- ▶ Linguistic knowledge figures prominently in systems
- ▶ Statistical systems feature linguistic features
- ▶ Deep learning methods enabled end-to-scale training sets
 - ▶ Particularly effective in areas like Machine learning
 - ▶ “Natural language processing from scratch”
 - ▶ Model architectures are still inspired by linguistic theories
- ▶ The debate is far from being settled. Linguistic knowledge is particularly needed in problems that require “deep understanding”.

What type of math is needed

<https://eduassistpro.github.io/>

- ▶ Probabilities
 - ▶ The output of a classifier is often expressed in terms of a probabilistic distribution: “This review has a 82% probability of being positive, and a 18% probability of being negative.”
 - ▶ For some models (e.g., Naive Bayes), the probabilities θ are in the form of probabilities
- ▶ Calculus: know how to take derivatives
 - ▶ The most basic form of machine learning is gradient descent/ascent to achieve local minima/minimums
- ▶ Linear algebra: increasingly, you have to manipulate vectors and matrices (or “tensors”)
- ▶ Some of you may not have calculus. We plan to have some tutorials on this topic.

Where do you need linguistics?

<https://eduassistpro.github.io/>

- ▶ Most of the NLP tasks are intuitive.
Assignment Project Exam Help
 - ▶ The part of speech of a word: verbs, nouns, adjectives
 - ▶ Named entities: person, organization, geographical entities, etc.
 - ▶ Reviews: This is a positive review
- ▶ Some linguistic training
Assignment Help WeChat edu_assist_pro
 - ▶ Syntactic trees (constituent or dependency)
- ▶ When breaking down an application into smaller parts, you can solve with machine learning, you need a good understanding of different layers of analysis: morphology, syntax, semantics, discourse and dialogues, etc.
- ▶ You also need good linguistic intuition to come up with good features or architectures in your statistical model

What kind of programming skills do you need?

<https://eduassistpro.github.io/>

Assignment Project Exam Help

- ▶ Python, Python, Python!
- ▶ Python libraries:
 - ▶ numpy
 - ▶ Tensor
 - ▶ We are going to use PyTorch for some of o
- ▶ We are hold tutorials on PyTorch for people this during recitation.

Course requirements

<https://eduassistpro.github.io/>

- ▶ Assignment Project Exam Help
<https://eduassistpro.github.io/>
- ▶ Prerequisites
 - ▶ CS114 or permission by instructor (talk to sure you should take the course)
 - ▶ Programming experience: familiar with Python and Python packages
 - ▶ Statistical and ability to pick up some linguistics
- ▶ Disciplines Relevant to NLP:
<https://eduassistpro.github.io/>
 - ▶ Linguistics
 - ▶ Computer science, Artificial Intelligence
 - ▶ Machine learning

Textbooks

<https://eduassistpro.github.io/>

- ▶ Textbooks
 - ▶ **Assignment Project Exam Help**
 - ▶ Required: Introduction to Natural Language Processing by Jacob Eisenstein (pre-publication version from <https://github.com/jacobeise> class/b from <https://github.com/jacobeise> d es.pdf)
 - ▶ Recom Smola: <https://eduassistpro.github.io/> ex J. accessed from <https://d2l.ai>)
 - ▶ Supplemental online material
 - ▶ PyTorch tutorials:
https://pytorch.org/tutorials/beginner/deep_learning_60min_blitz.html
 - ▶ PyTorch Documentation:
<https://pytorch.org/docs/stable/index.html>

Perusall

<https://eduassistpro.github.io/>

Assignment Project Exam Help

- ▶ I plan to experiment with Perusall: <https://a> /
- ▶ Perusall allows users to highlight specific areas in a document to enable easier discussion.
- ▶ When possible, add WeChat edu_assist_pro to each class so that you can enter comments. I can then address those questions during the session.
- ▶ To access the course, enter the access code: XUE-XPWJB

Course work

<https://eduassistpro.github.io/>

- ▶ Participation: 5
 - ▶ Credits for active participation in class discussions, and for asking questions.
- ▶ 4 Projects (50%)
 - ▶ Projects are more open-ended, though still for some students
 - ▶ Add WeChat [edu_assist_pro](https://eduassistpro.github.io/) for help.
- ▶ 3-4 Assignments
 - ▶ Programming assignments for well
- ▶ 1 final Quiz (15%)
 - ▶ Add WeChat [edu_assist_pro](https://eduassistpro.github.io/) for help.
 - ▶ The quiz tests important concepts covered in the course.
- ▶ **Academic integrity:** You should finish homework assignments, exams, and project reports on your own unless a project is explicitly stated as a collaborative project. Late projects are subject to grade deduction.
